EDUCATION

Purdue University

B.S. Computer Engineering

West Lafayette, IN

Aug. 2023 – Expected May 2027

- Data Science Certificate; concentrations in Artificial Intelligence and Machine Learning, Computer Systems

EXPERIENCE

Fiserv Corporation

Software Engineering Intern

Fishers, IN

Jun. 2026 – Aug. 2026

- Owned the design and shared implementation of four C#/.NET APIs, creating Visio architecture diagrams from scratch for dev-team review and approval and OpenAPI contracts for stakeholder feedback
- Published the APIs' reusable core logic as a NuGet package using Dapper, Oracle stored procedures, and interface-driven dependency injection across web, service, and data layers
- Delivered the Person endpoint, parameter validation, and response mapping, with isolated unit tests using mocked dependencies across each layer
- Collaborated in Agile sprints with Jira, daily standups, backlog grooming, sprint planning, and MR reviews

Hansen Gress Corporation

Software Engineering Intern

Juneau, AK (Remote)

Jan. 2025 – Mar. 2026

- Shipped an internal React/Go web app, consolidating multi-domain IT workflows into a single prompt-driven interface, shaping the product through five technician shadow sessions and demos
- Integrated 79 agent callable tools across 12 SaaS APIs with typed clients, background synchronization into MySQL, and Qdrant semantic search across company ticketing, time tracking, networking, security, and documentation
- Engineered a custom OpenRouter agent harness for multi-step planning, tool execution, conversation memory, and write approvals, reducing LLM costs 80% through summarization and semantically fetched data and skills
- Hardened the Dockerized production stack on DigitalOcean with GitHub Actions CI/CD, unit and Playwright E2E tests, observability alerts, Google Secret Manager, strict schema validation, retries, and execution timeouts

PROJECTS

Stryde | *Swift, SwiftUI, GRDB, Supabase, Cloudflare*

Jan. 2026 – Present

- Launched an iOS weightlifting app in SwiftUI with set and exercise recommendations, workout logging, and hypertrophy, strength and bodyweight analytics driven by user-configured goals and training preferences
- Implemented a persistence system in GRDB with bidirectional Supabase sync and reconciliation, multi-provider auth, and GitHub Actions CI/CD spanning unit, UI, snapshot, migration, and E2E testing

Peripheral | *Go, Svelte, TimescaleDB, Redis, Kubernetes, NumPy*

Dec. 2021 – Sep. 2025

- Designed a natural-language strategy engine that generated and validated Python for real-time screening, alerts, and historical backtesting across ~1B OHLCV rows, ~20K securities, and 20+ years of market data
- Distributed strategy jobs through Redis to autoscaling Python workers on Kubernetes with sandboxed execution and TimescaleDB hypertables, compression, and indexing, reducing runtimes from hours to minutes

Goal Architecture Platform | *React, Rust, Neo4j, Docker, NGINX*

Nov. 2024 – Present

- Built a full-stack React/TypeScript and Rust web app used daily to manage 10k+ goals and tasks, modeling goal hierarchies in Neo4j with automated scheduling, progress analytics, and recurring routines

SKILLS

Languages: Go, TypeScript/JavaScript, Python, C#, SQL, Swift, Rust, C/C++

Frameworks: .NET, React, Svelte, SwiftUI, FastAPI

Data: PostgreSQL/TimescaleDB, MySQL, Redis, Neo4j, Qdrant, Supabase, Oracle

Infrastructure: Git, Linux, Docker, Kubernetes, GitHub Actions, NGINX, Cloudflare, GCP, DigitalOcean

Engineering: REST APIs, API design, CI/CD, Agile/Scrum, Jira, unit/E2E testing
